# Fast Facts

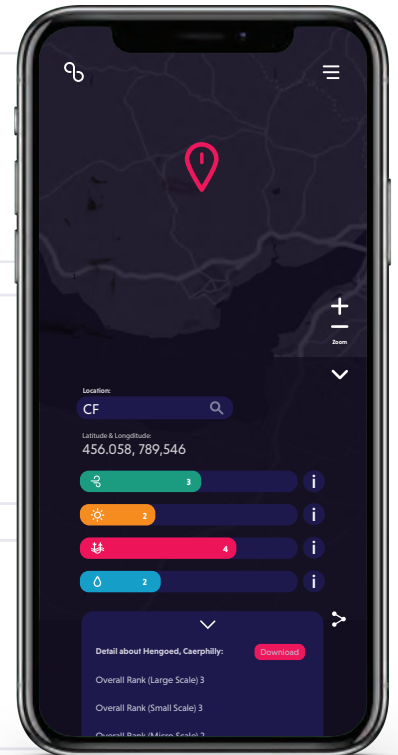

The first guide to map renewable heat and energy generation potential across Wales.

A new communications tool to support Welsh Government targets for all new homes to run on renewable heat and energy by 2025<sup>1</sup>.

Nuable is a free tool, giving users unprecedented access to clean energy data.

@getnuable

## What we do

Designed to disrupt perceptions of home energy and heating, Nuable is a free guide to help consumers and developers identify renewable energy potential in any locality, using just a postcode.

Our newly developed map ranks Wind, Solar, Hydro and Ground Source Heat on a scale of 1-5. Scoring 5 indicates the optimal energy source for harnessing.

Not just a tool, Nuable gives users access to specialist suppliers and installers and information on existing grant schemes to support the transition to green energy.

## Who we are

Nuable is a CIC company developed with a strong social purpose to benefit the community rather than to make a profit for shareholders.

Our not for profit was built in collaboration with government funding between the British Geological Survey, National Resources Wales, Land Use Consultants, Yellow Sub Geo and Yellow Sub Creative.

## Aims

To positively support voices seeking to lobby and drive the change to renewable energy technologies whilst also being a helpful resource for suppliers, installers and the general public.

### Covering our cardboard arses (disclaimer):

Nuable is intended for prospective use only. The maps and data are caveated with the need for site specific information and no guarantee is provided for decisions based upon the use of the maps. Nuable and its stakeholders do not take any responsibility for the decisions made using this tool which contains maps derived from British Geological Survey materials © UKRI, 2021 used under Open Government Licence.
